

Compare Angles

Diving into Mastery Guidance for Educators

Each activity sheet is split into three sections, diving, deeper and deepest, which are represented by the following icons:

These carefully designed activities take your children through a learning journey, initially ensuring they are fluent with the key concept being taught; then applying this to a range of reasoning and problem-solving activities.

These sheets might not necessarily be used in a linear way. Some children might begin at the 'Deeper' section and in fact, others may 'dive straight in' to the 'Deepest' section if they have already mastered the skill and are applying this to show their depth of understanding.

National Curriculum Objective(s)

- Identify right angles, recognise that two right angles make a half-turn, three make three quarters of a turn and four a complete turn; identify whether angles are greater than or less than a right angle.

Click on these angles (the blue part!) to match with their descriptions.

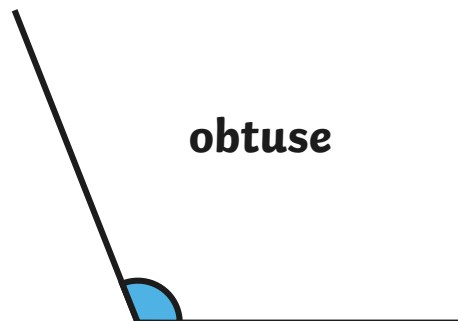

A right angle is 90 degrees, or a quarter turn.

An angle bigger than a right angle, but not a straight line or half turn (90-179 degrees) is called an **obtuse** angle.

An angle smaller than a right angle (less than 90 degrees) is called an **acute** angle.

Can you tell if these angles are acute, obtuse or right angles?

Look at this clock face.

Is the angle between the hour hand and the minute hand acute, obtuse or a right angle?

Look at this clock face.

Is the angle between the minute hand and the hour hand acute, obtuse or a right angle?

Look at this clock face.

Is the angle between the hour hand and the minute hand acute, obtuse or a right angle?

Look at these letters. Can you see any acute, obtuse or right angles where the lines meet?

obtuse and
acute angles

right angles

acute angles

We can follow instructions about angles to draw shapes.

I'm thinking of a shape with three right angles and two obtuse angles: what could it be?

Which of these statements are correct?

- This shape is a quadrilateral so it must have four right angles.
- This shape has two obtuse angles. ✓
- This shape has two right angles.
- This shape has two acute angles. ✓

Compare Angles

Dive in by completing your own activity!

- 1) Complete these sentences:
- An angle less than a right angle is called an acute angle.
- An angle greater than a right angle, but less than 180° , is called an obtuse angle.
- 2) Label each of these angles as obtuse, acute or a right angle. Draw your own angle in the empty box and label it:

- 1) Are the angles between the hour and minute hands on these clocks obtuse, acute or right angles?

- 2) Place these letters correctly in the Venn diagram:

- 1) Draw a shape with two obtuse angles and two acute angles.

- 2) Nikolas and Carla describe this shape differently:
